

Khai Tran BEng (Hons)
Associate Director

Having graduated with a civil & structural engineering degree in 1998, Khai spent the first part of his career in the water sector assisting with the design of water sewage treatment works and water retaining structures before moving into consultancy within the residential sector where he has accumulated nearly 25 years of infrastructure and civil engineering design experience.

Khai has been involved with a diverse and wide range of infrastructure designs specialising in flood risk assessments, drainage strategies & SUDs, S278 highway improvements, S38 & S104 mains roads and drainage, earthworks cut & fill, onshore windfarms tracks and hardstands.

Project management is also a key role in Khai's skillset coordinating multi-disciplinary teams to ensure effective coordination and delivery of projects ranging from small to large-scale residential led-mixed use developments.

With a keen eye for detail, a drive to providing valued engineered, cost effective design solutions and ability to lead teams, Khai maintains clients needs at the forefront of all projects.
